

# Core Library Reference

core name space, version 0.0.3

## type identifiers

%lambda	closure lambda
%exception	exception
%vector	vector
%closure	lexical closure
char	
cons	
fixnum	fix
float	
func	
keyword	
ns	
null	
stream	
string	
struct	
symbol	sym
vector	

## Core

<b>*version*</b>	string	version string
<b>%format</b> <i>T string list</i>	string	formatted output
<b>%load-file</b> <i>string</i>	()	load file through core reader
<b>%make-keyword</b> <i>string</i>		make keyword
<b>%quote</b> <i>T</i>	cons	quote form
<b>apply</b> <i>func list</i>	T	apply <i>func</i> to <i>list</i>
<b>compile</b> <i>T</i>	T	compile T in null environment
<b>gensym</b>	sym	create unique uninterned symbol

## Special Form

<b>%defmacro</b> <i>sym list . body</i>	symbol	define macro
<b>lambda</b> <i>list . body</i>	func	define closure
<b>if</b> <i>T 'T</i>	T	conditional
<b>if</b> <i>T 'T 'T</i>	T	conditional

## Fixnum

<b>1+</b> <i>fix</i>	fix	increment <i>fix</i>
<b>1-</b> <i>fix</i>	fix	decrement <i>fix</i>
<b>logand</b> <i>fix 'fix</i>	fix	bitwise and
<b>lognot</b> <i>fix</i>	fix	bitwise negate
<b>logor</b> <i>fix 'fix</i>	fix	bitwise or
<b>logxor</b> <i>fix 'fix</i>	fix	bitwise xor

## List

<b>%dropl</b> <i>list fixnum</i>	list	drop left
<b>%dropr</b> <i>list fixnum</i>	list	drop right
<b>%findl-if</b> <i>func list</i>	T	element if applied function returns an atom, () otherwise
<b>%foldl</b> <i>func T list</i>	list	left fold
<b>%foldr</b> <i>func T list</i>	list	right fold
<b>%mapc</b> <i>func list</i>		apply <i>func</i> to <i>list</i> cars, return <i>list</i>
<b>%mapcar</b> <i>func list</i>	list	new list from applying <i>func</i> to <i>list</i> cars
<b>%mapl</b> <i>func list</i>	list	apply <i>func</i> to <i>list</i> cdrs, return <i>list</i>
<b>%maplist</b> <i>func list</i>	list	new list from applying <i>func</i> to <i>list</i> cdrs
<b>%positionl-if</b> <i>func list</i>	T	index of element if <i>func</i> returns an atom, otherwise ()
<b>%append</b> <i>list</i>	list	append lists
<b>reverse</b> <i>list</i>	list	reverse <i>list</i>

## String

<b>%string-position</b> <i>char string</i>	fix	index of char in <i>string</i> , nil if not found
<b>%substr</b> <i>string fix 'fix string</i>		substring of <i>string</i> from start to end

## Vector

<b>%make-vector</b> <i>list</i>	vector	specialized vector from list
<b>%map-vector</b> <i>func vector</i>	vector	make vector of <i>func</i> applications on <i>vector</i> elements
<b>make-vector</b> <i>list</i>	vector	general vector from list
<b>bit-vector-p</b> <i>vector</i>	bool	bit vector?
<b>vector-displaced-p</b> <i>vector</i>	bool	a displaced vector?
<b>vector-length</b> <i>vector</i>	fix	length of <i>vector</i>
<b>vector-ref</b> <i>vector fix</i>	T	element of <i>vector</i> at index <i>fix</i>
<b>vector-slice</b> <i>vector fix 'fix</i>	vector	displaced vector from start to end
<b>vector-type</b> <i>vector</i>	symbol	vector type

## Macro

<b>define-symbol-macro</b> <i>sym T</i>	symbol	define symbol macro
<b>macro-function</b> <i>sym list</i>	T	extract macro function with environment
<b>macroexpand</b> <i>T list</i>	T	expand macro expression in environment
<b>macroexpand-1</b> <i>T list</i>	T	expand macro expression once in environment

Reader/Printer			Exception			Reader Syntax	
<b>read</b> <i>stream bool T</i>	<i>T</i>	read stream object	<b>%exceptionf</b> <i>stream string bool struct</i>	<i>string</i>	format exception	;	comment to end of line
<b>write</b> <i>T bool stream</i>	<i>T</i>	write escaped	<b>%make-exception</b> <i>sym T string sym list</i>	<i>struct</i>	create exception	#   . . .   #	block comment
Predicate			Macro Definitions			' <i>form</i>	quoted <i>form</i>
<b>%minusp</b> <i>fix</i>	<i>bool</i>	negative <i>fix</i>	<b>error</b> <i>T symbol list</i>	<i>string</i>	error format	` <i>form</i>	backquoted <i>form</i>
<b>%numberp</b> <i>T</i>	<i>bool</i>	float or <i>fixnum</i>	<b>exceptionp</b> <i>struct</i>	<i>bool</i>	predicate	`( <i>...</i> )	backquoted list (proper lists)
<b>%uninternedp</b> <i>sym</i>	<i>bool</i>	<i>symbol</i> interned	<b>raise</b> <i>T symbol list</i>		raise exception	, <i>form</i>	eval backquoted <i>form</i>
<b>charp</b> <i>T</i>	<i>bool</i>	<i>char</i>	<b>raise-env</b> <i>T symbol list</i>		raise exception	,@ <i>form</i>	eval-splice backquoted <i>form</i>
<b>consp</b> <i>T</i>	<i>bool</i>	<i>cons</i>	<b>warn</b> <i>T string</i>	<i>T</i>	warning	( <i>...</i> )	constant <i>list</i>
<b>fixnump</b> <i>T</i>	<i>bool</i>	<i>fixnum</i>	<b>with-exception</b> <i>func func</i>		catch exception	()	empty <i>list</i> , prints as :nil
<b>floatp</b> <i>T</i>	<i>bool</i>	<i>float</i>				( <i>... . .</i> )	dotted <i>list</i>
<b>functionp</b> <i>T</i>	<i>bool</i>	function				"..."	<i>string</i> , <i>char vector</i>
<b>keywordp</b> <i>T</i>	<i>bool</i>	keyword					single escape in strings
<b>listp</b> <i>T</i>	<i>bool</i>	<i>cons</i> or ()	<b>and</b> &rest ...	<i>T</i>	and of rest list	#*...	bit vector
<b>namespacep</b> <i>T</i>	<i>bool</i>	<i>namespace</i>	<b>cond</b> &rest ...	<i>T</i>	cond switch	#x...	hexadecimal <i>fixnum</i>
<b>null</b> <i>T</i>	<i>bool</i>	:nil or ()	<b>let</b> <i>list</i> &rest ...	<i>T</i>	lexical bindings	#.	read-time eval
<b>stream</b> <i>T</i>	<i>bool</i>	<i>stream</i>	<b>let*</b> <i>list</i> &rest ...	<i>T</i>	dependent list	#\.	<i>char</i>
<b>stringp</b> <i>T</i>	<i>bool</i>	<i>char vector</i>			of bindings	#(:type ...)	<i>vector</i>
<b>structp</b> <i>T</i>	<i>bool</i>	<i>struct</i>	<b>or</b> &rest ...	<i>T</i>	or of rest list	#s(:type ...)	<i>struct</i>
<b>symbolp</b> <i>T</i>	<i>bool</i>	<i>symbol</i>	<b>progn</b> &rest ...	<i>T</i>	evaluate rest list,	#:symbol	uninterned <i>symbol</i>
<b>vectorp</b> <i>T</i>	<i>bool</i>	<i>vector</i>			return last evaluation		
Type System			<b>unless</b> <i>T</i> &rest ...	<i>T</i>	if <i>T</i> is (), ( <b>progn</b> ...)	"` , ;	terminating macro char
<b>%core-type-p</b> <i>T</i>	<i>bool</i>	a core type?	<b>when</b> <i>T</i> &rest ...	<i>T</i>	if <i>T</i> is an <i>atom</i> , ( <b>progn</b> ...) otherwise ()	#	non-terminating macro char
<b>def-type</b> <i>symbol list</i>	<i>struct</i>	create core type of name <i>symbol</i>				!\$%&*+- .	symbol constituents
<b>type-of</b> <i>T</i>	<i>sym</i>	core type <i>symbol</i>				<>=?@[	
<b>typep</b> <i>T typespec</i>	<i>bool</i>	does <i>T</i> conform to <i>typespec</i> ?				:^_{ }~ /	
Stream						A..Za..z	
<b>%peek-char</b> <i>stream char</i>		read <i>char</i> from stream, unread	<b>append</b> &rest ...	<i>list</i>	append lists	0..9	
<b>%format</b> <i>T string list T</i>		formatted output to stream	<b>format</b> <i>T string</i> &rest ...	<i>T</i>	formatted output	0x09 #\tab	whitespace
<b>read</b> <i>stream T 'T</i>	<i>T</i>	read from stream with EOF handling	<b>funcall</b> <i>func</i> &rest ...	<i>T</i>	apply <i>func</i> to ...	0x0a #\linefeed	
<b>write</b> <i>T T stream</i>		write escaped object to stream	<b>list</b> &rest ...	<i>list</i>	<i>list</i> of ...	0x0c #\page	
			<b>list*</b> &rest ...	<i>list</i>	append ...	0x0d #\return	
			<b>vector</b> &rest	<i>vector</i>	<i>vector</i> of ...	0x20 #\space
