

Core Library Reference

core name space, version 0.0.11

type identifiers

%lambda	closure lambda
%exception	exception
%vector	vector
%closure	lexical closure
bool	false if (), otherwise true
char	
cons	
fixnum	fix
float	
function	fn
keyword	key
ns	
null	
stream	
string	str
struct	
symbol	sym
vector	vec

Core

%format <i>T string list</i>	string	formatted output
load-file <i>string</i>	bool	load file through core reader
%make-keyword <i>string</i>	keyword	make keyword
eval <i>T</i>	<i>T</i>	eval form
apply <i>fn list</i>	<i>T</i>	apply <i>fn</i> to <i>list</i>
compile <i>T</i>	<i>T</i>	compile <i>T</i> in null environment
gensym	sym	create unique uninterned symbol
eql <i>T T</i>	bool	eql predicate

Special Forms

%defmacro <i>sym list . body</i>	sym	define macro
%lambda <i>list . body</i>	fn	define closure
%if <i>T 'T</i>	<i>T</i>	conditional
%if <i>T 'T 'T</i>	<i>T</i>	conditional

Fixnum

1+ <i>fix</i>	fix	increment <i>fix</i>
1- <i>fix</i>	fix	decrement <i>fix</i>
logand <i>fix 'fix</i>	fix	bitwise and
lognot <i>fix</i>	fix	bitwise negate
logor <i>fix 'fix</i>	fix	bitwise or
logxor <i>fix 'fix</i>	fix	bitwise xor

List

%dropl <i>list fixnum</i>	list	drop left
%dropr <i>list fixnum</i>	list	drop right
%findl-if <i>fn list</i>	<i>T</i>	element if applied <i>fn</i> returns an <i>atom</i> , () otherwise
%foldl <i>fn T list</i>	list	left fold
%foldr <i>fn T list</i>	list	right fold
%mapc <i>fn list</i>	list	apply <i>fn</i> to <i>list</i> cars, return <i>list</i> new list from applying <i>fn</i> to <i>list</i> cars
%mapcar <i>fn list</i>	list	new list from applying <i>fn</i> to <i>list</i> cars
%mapl <i>fn list</i>	list	apply <i>fn</i> to <i>list</i> cdrs, return <i>list</i> new list from applying <i>fn</i> to <i>list</i> cdrs
%maplist <i>fn list</i>	list	new list from applying <i>fn</i> to <i>list</i> cdrs
%positionl-if <i>fn list</i>	<i>T</i>	index of element if <i>fn</i> returns an <i>atom</i> , otherwise ()
%append <i>list</i>	list	append lists
reverse <i>list</i>	list	reverse <i>list</i>

String

%string-position <i>char str</i>	fix	index of char in <i>string</i> , nil if not found
%substr <i>str fix 'fix</i>	str	substring of <i>string</i> from start to end
%string= <i>str str'</i>	bool	string predicate

Vector

%make-vector <i>list</i>	vec	specialized vector from <i>list</i>
%map-vector <i>fn vector</i>	vec	mapc for vectors
make-vector <i>list</i>	vec	general vector from <i>list</i>
bit-vector-p <i>vector</i>	bool	bit vector?
vector-displaced-p <i>vec</i>	bool	a displaced vector?
vector-length <i>vector</i>	fix	length of <i>vector</i>
vector-ref <i>vector fix</i>	<i>T</i>	element of <i>vector</i> at index <i>fix</i>
vector-slice <i>vector fix 'fix</i>	vec	displaced vector from start for length
vector-type <i>vector</i>	symbol	vector type

Macro

define-symbol-macro <i>sym T</i>	symbol	define symbol macro
macro-function <i>sym list ()</i>	<i>T</i>	extract macro function with null environment
macroexpand <i>T list ()</i>	<i>T</i>	expand macro expression in null environment
macroexpand-1 <i>T list ()</i>	<i>T</i>	expand macro expression once in null environment

Predicates			Exception			Modules		
minusp <i>fix</i>	<i>bool</i>	negative value	%exceptionf <i>stream str bool struct</i>			modules <i>list</i>		module definitions
numberp <i>T</i>	<i>bool</i>	float or fixnum		<i>string</i>	format exception	module-version <i>string</i>	<i>string</i>	module version
%uninternedp <i>sym</i>	<i>bool</i>	symbol interned	%make-exception <i>sym T str sym list</i>			module-namespace <i>string</i>	<i>ns</i>	namespace
charp <i>T</i>	<i>bool</i>	char		<i>struct</i>	create exception	provide <i>string list</i>	<i>T</i>	define module
consp <i>T</i>	<i>bool</i>	cons	error <i>T symbol list</i>	<i>string</i>	error format	require <i>string bool</i>	<i>bool</i>	load module
fixnump <i>T</i>	<i>bool</i>	fixnum	exceptionp <i>struct</i>	<i>bool</i>	predicate			
floatp <i>T</i>	<i>bool</i>	float	raise <i>T sym str</i>		raise exception			
functionp <i>T</i>	<i>bool</i>	function	raise-env <i>T sym str</i>		raise exception			
keywordp <i>T</i>	<i>bool</i>	keyword	warn <i>T string</i>	<i>T</i>	warning			
listp <i>T</i>	<i>bool</i>	cons or ()	with-exception <i>fn fn</i>	<i>T</i>	catch exception			
namespacep <i>T</i>	<i>bool</i>	namespace						
null <i>T</i>	<i>bool</i>	:nil or ()						
streamp <i>T</i>	<i>bool</i>	stream						
stringp <i>T</i>	<i>bool</i>	char vector						
structp <i>T</i>	<i>bool</i>	struct						
symbolp <i>T</i>	<i>bool</i>	symbol						
vectorp <i>T</i>	<i>bool</i>	vector						
Type System			Macro Definitions					
%core-type-p <i>T</i>	<i>bool</i>	a core type?	and &rest ...	<i>T</i>	logical and of ...	<i>;</i>		comment to end of line
def-type <i>symbol list</i>	<i>struct</i>	create core type of name <i>symbol</i>	cond &rest ...	<i>T</i>	cond switch	<i># ... #</i>		block comment
type-of <i>T</i>	<i>sym</i>	core type symbol	let <i>list</i> &rest ...	<i>T</i>	lexical bindings	<i>`form</i>		quoted form
			let* <i>list</i> &rest ...	<i>T</i>	dependent list of bindings	<i>`form</i>		backquoted form
			or &rest ...	<i>T</i>	logical or of ...	<i>`(...)</i>		backquoted list (proper lists)
			progn &rest ...	<i>T</i>	evaluate rest list, return final evaluation	<i>,form</i>		eval backquoted form
			unless <i>T</i> &rest ...	<i>T</i>	if <i>T</i> is (), (progn ...) otherwise ()	<i>,@form</i>		eval-splice backquoted form
			when <i>T</i> &rest ...	<i>T</i>	if <i>T</i> is an <i>atom</i> , (progn ...) otherwise ()	<i>(...)</i>		constant <i>list</i>
						<i>()</i>		empty <i>list</i> , prints as :nil
						<i>(... . .)</i>		dotted <i>list</i>
						<i>"..."</i>		<i>string</i> , <i>char vector</i>
						<i> </i>		single escape in strings
						<i>#*...</i>		bit vector
						<i>#x...</i>		hexadecimal <i>fixnum</i>
						<i>#.</i>		read-time eval
						<i>#\.</i>		<i>char</i>
						<i>#(:type ...)</i>		<i>vector</i>
						<i>#s(:type ...)</i>		<i>struct</i>
						<i>#:symbol</i>		uninterned <i>symbol</i>
						<i>"`,";</i>		terminating macro char
						<i>#</i>		non-terminating macro char
						<i>!\$%&*+-.</i>		symbol constituents
						<i><=>?[]</i>		
						<i>:_{}~ </i>		
						<i>A..Za..z</i>		
						<i>0..9</i>		
						<i>0x09 #\tab</i>		whitespace
						<i>0x0a #\linefeed</i>		
						<i>0x0c #\page</i>		
						<i>0x0d #\return</i>		
						<i>0x20 #\space</i>		
Stream			Closures					
%peek-char <i>stream</i>	<i>char</i>	read char from stream, unread	append &rest ...	<i>list</i>	append lists			
%format <i>T string list</i>	<i>T</i>	formatted output to stream	format <i>T string</i> &rest ...	<i>T</i>	formatted output			
read <i>stream bool T</i>	<i>T</i>	read from stream with EOF handling	funcall <i>fn</i> &rest ...	<i>T</i>	apply <i>fn</i> to ...			
write <i>T bool stream</i>	<i>T</i>	write escaped object to stream	list &rest ...	<i>list</i>	<i>list</i> of ...			
			list* &rest ...	<i>list</i>	append ...			
			mapc <i>fn</i> &rest ...	<i>list</i>	mapc of ...			
			mapcar <i>fn</i> &rest ...	<i>list</i>	mapcar of ...			
			mapl <i>fn</i> &rest ...	<i>list</i>	mapl of ...			
			maplist <i>fn</i> &rest ...	<i>list</i>	maplist of ...
